Profile

With 4.5+ years as a Software Engineer, I have specialized in building scalable, well-documented code and robust automated tests to ensure high-quality, reliable software products. Skilled in designing and deploying RESTful APIs and backend services for business-critical applications.

Skills

- OS
- GNU/Linux, Windows
- Languages
- Python, HTML/CSS, JavaScript
- Frameworks
- Flask, Django, Pytest
- Database
- MySQL
- Tools
- Docker, Postman Kubernetes, Git, Jira

Education

- Bachelor of Technology in CSE**
Sagar Institute of Research, Technology & Science, Bhopal 2016 - 2020
8.03 CGPA
- Intermediate**
Christ Memorial School, Bhopal 2015- 2016
79.6 %
- High School**
Christ Memorial School, Bhopal 2013- 2014
78.5 %

Experience

- Spearheaded enhancements to the hardware reservation system, reducing scheduling conflicts by 40% and improving resource utilization by 25%.
- Developed and maintained 30+ scalable RESTful APIs using Django and Flask for multiple business-critical applications, ensuring modular architecture and smooth data exchange across services.
- Collaborated within an agile team to enhance and maintain an automation testing framework, improving test stability by 20% and supporting faster feature delivery.

Projects

- Mindteck | Sr. Software Engineer** Oct 2024 - present
- Cloud Replication Service**
 - Created and executed automation test scripts using the Pytest framework, increasing test coverage by 35% and reducing manual testing efforts by 40%.
 - Perform functional and regression testing by validating different scenarios against the test plan, identifying and resolving 50+ defects pre-release to ensure product stability.
 - Identified and prioritized areas for automation, reducing manual testing cycles by 30% and accelerating release timelines by 15%.
- Offline Partners Service**
 - Contributed to the development of a backend solution enabling an organization to manage the buyback of old mobile phones via an Android application.
 - Engineered 20+ RESTful APIs with Django across multiple modules, enabling seamless data exchange and reducing integration bugs by 30%.
 - Optimized system performance, reducing API response time by 30% and improving user experience for operational staff.

- Tata Consultancy Services | System Engineer** Sep 2020 - Oct 2024
- Common Test Lab**
 - Built a web-based system for reserving hardware resources and executing jobs using Flask and Vue.js, reducing manual scheduling efforts by 35%.
 - Established a monolithic architecture with a MySQL backend, supporting structured data storage for 10K+ resource and job records.
 - Designed and implemented backend functionality aligned with architecture standards, enabling 15+ feature deployments with consistent reliability and minimal post-release issues.

- Testing Automation Services**
 - Built REST APIs using Python and Flask, containerized with Docker, and deployed on Kubernetes, improving deployment consistency and reducing release times by 25%.
 - Integrated CI/CD pipelines for a microservices-based architecture, reducing deployment errors by 40% and ensuring consistent production releases.
 - Contributed backend functionalities in compliance with architecture standards, maintaining 99% deployment uptime.

Certifications and Achievements

- Achieved AZ-900 Microsoft Azure Fundamentals Certification
- Achieved 5 star in Python on the hackerrank platform
- Academy & Blood Representative of Robin Hood Army Bhopal

Interests

- Singing
- Social work
